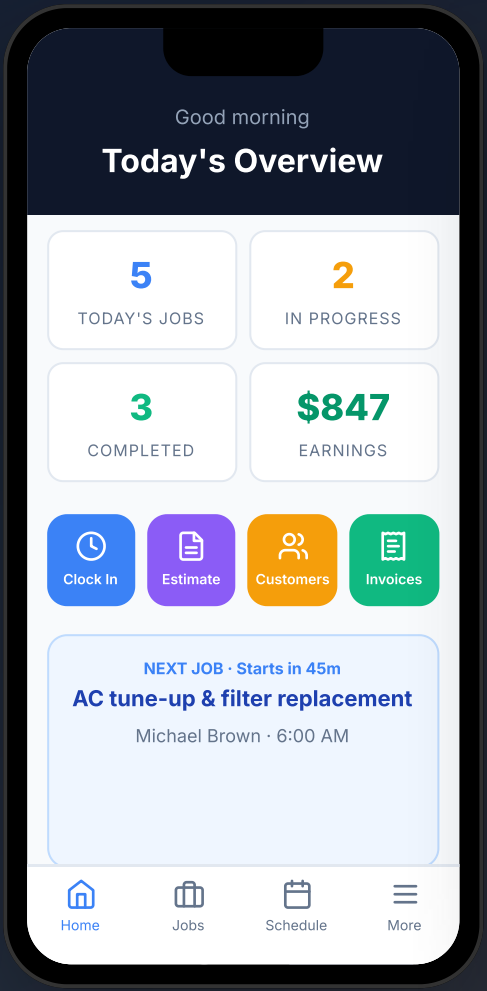
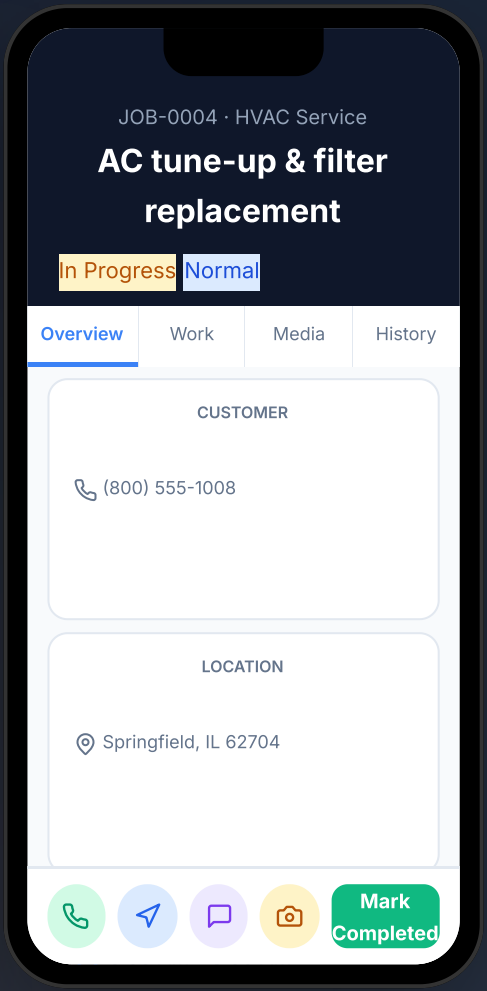
NATIVE MOBILE APP

Your Techs' New Best Tool in the Truck

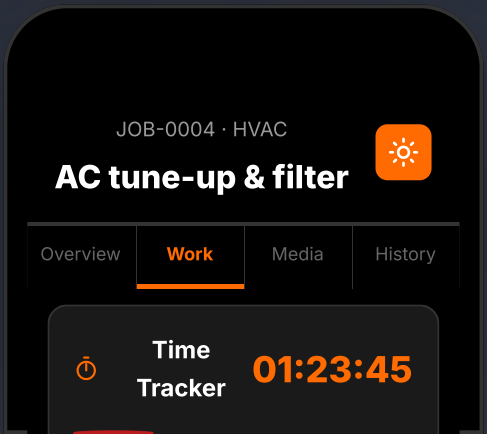
A native iOS & Android app built for the field — offline-ready, voice-enabled, and designed for work gloves.

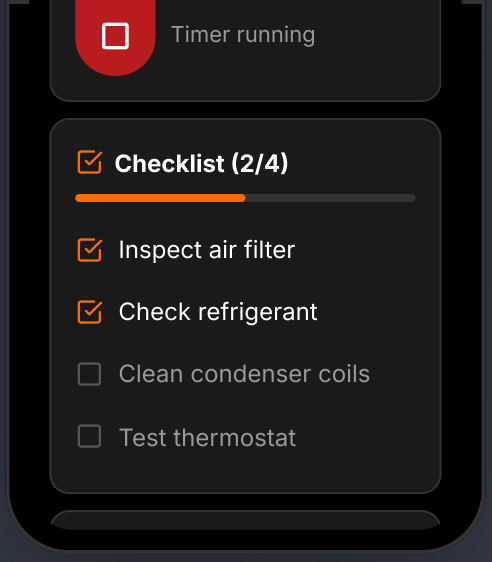


Home Dashboard



Job Detail





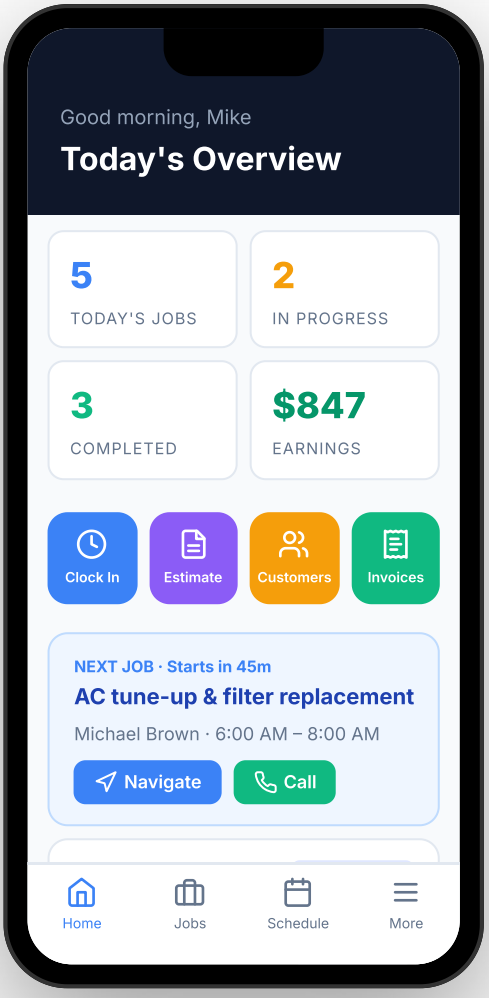
Field Mode

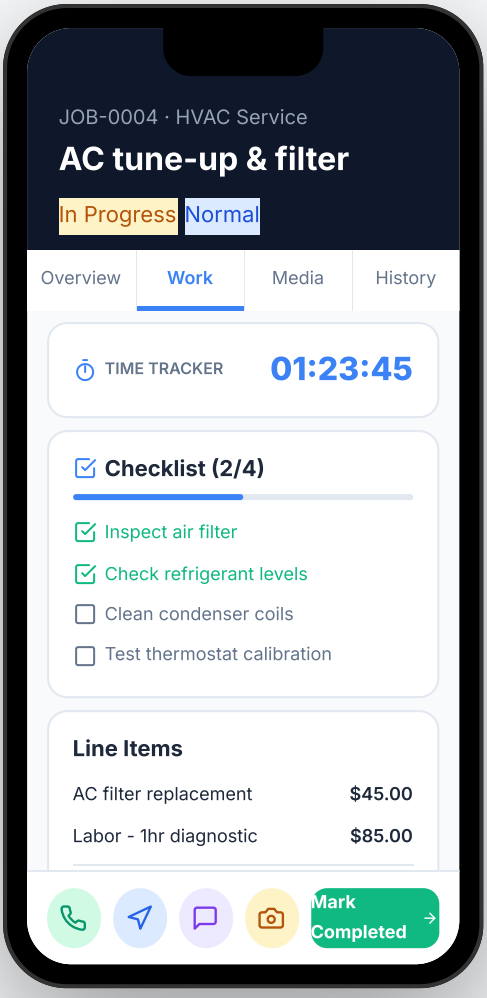
DAILY COMMAND CENTER

Start Every Day with Clarity

The home screen shows your tech everything they need for the day — jobs, earnings, next appointment with countdown timer, and quick actions.

- Time-based greeting with today's date
- 4 stat cards: Today's Jobs, In Progress, Completed, Earnings
- Quick action buttons: Clock In, Create Estimate, Customers, Invoices
- Next Job card with live countdown timer
- One-tap Call and Navigate buttons for the next job
- Today's full schedule with pull-to-refresh





COMPLETE JOB WORKSPACE

Everything for the Job, in One Screen

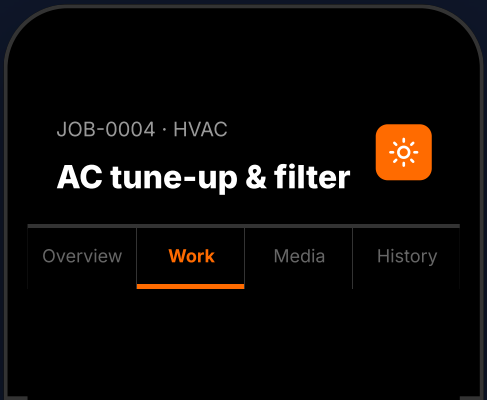
The job detail screen is the technician's workspace — 4 tabs covering overview, work execution, media capture, and activity history.

- **Overview:** Customer contact, location with navigation, schedule, and assigned crew
- **Work:** Time tracker, checklists with progress bar, line items, notes with voice-to-text
- **Media:** Photo capture (before/after/general) and digital signature collection
- **History:** Full activity timeline for the job
- Quick action bar: Call, Navigate, Note, Photo, and "On My Way" notification
- One-tap status transitions with GPS capture

BUILT FOR THE FIELD

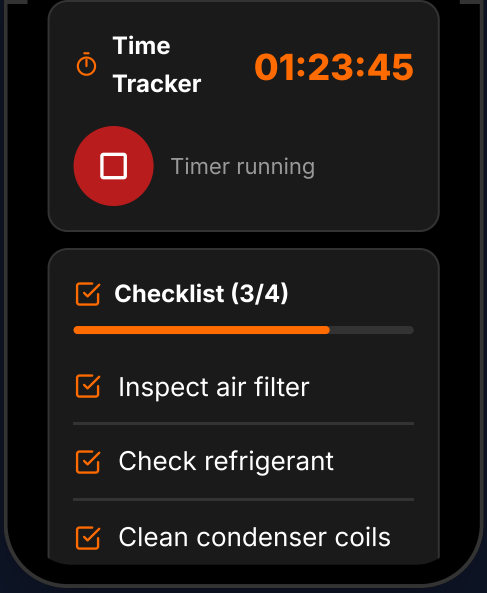
Field Mode: High-Contrast UI

One tap activates Field Mode — a high-contrast black-and-orange interface with



oversized tap targets designed for bright sunlight, dirty hands, and work gloves.

- Pure black background with white text for maximum contrast
- 56px+ tap targets — easy to hit with gloves
- Orange accent (#FF6B00) for primary actions
- Larger fonts and spacing throughout
- Toggle with one tap from the job detail header
- Applies to checklists, notes, photos, and all work screens



OFFLINE-FIRST ARCHITECTURE

Works Without Signal

Basements, rural properties, metal buildings — techs lose signal constantly. FieldService Pro keeps working regardless.

Offline Mutation Queue

Status changes, notes, photos, and checklist updates are queued locally and automatically synced when connectivity returns.

Automatic Sync

The sync processor watches for connectivity changes and processes the queue with retry logic and exponential backoff.

Cached Data

TanStack Query persists job data to device storage. Techs can view job details, customer info, and schedules even offline.

Offline Photo Storage

Photos are saved to the device filesystem and queued for upload. No photos are ever lost, even in zero-signal areas.

Offline Banner

A persistent banner shows pending changes count: "Offline — 3 changes pending." Techs always know their sync status.

Optimistic Updates

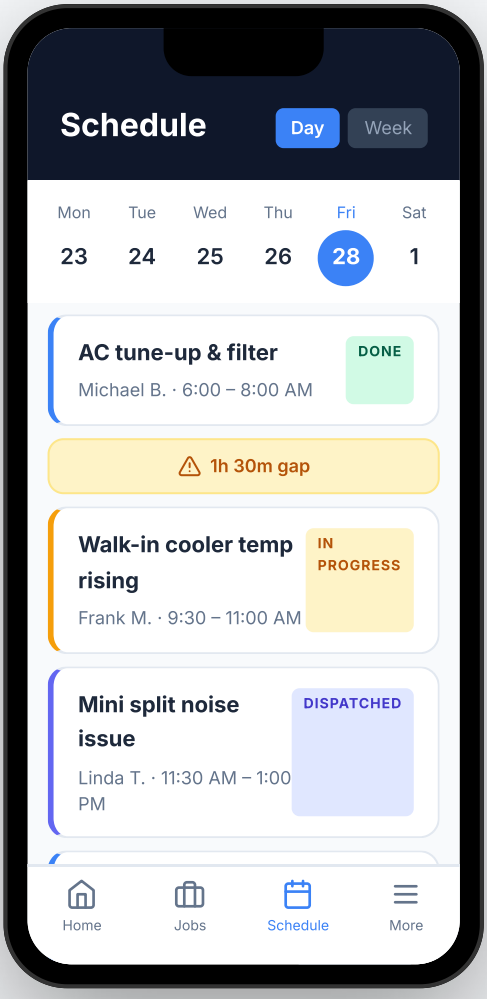
UI updates instantly even offline. Checklist toggles, status changes, and notes appear immediately while queued in the background.

ROUTE AWARENESS

Smart Schedule with Gap Detection

Day and week calendar views with two display styles — list and timeline. Smart gap detection highlights scheduling inefficiencies.

- Day view with list or timeline display modes
- Week view with day selector and job count indicators
- Gap warnings between jobs (e.g., "2h 30m gap")
- Current time indicator on timeline view
- Long-press quick preview with Call and Navigate
- Distance and travel time badges per job



AND MORE

Built for Real-World Field Work

Every feature was designed with input from technicians who use the app in the field every day.

Voice-to-Text Notes

Tap the mic button to dictate notes hands-free. Text is appended to the note field — no typing needed in dirty or wet conditions.

Photo Capture

Before, after, and general photos with optional captions. Stored offline if no signal, uploaded automatically when reconnected.

Digital Signatures

Capture customer signatures on the device screen. Stored with timestamps and user attribution for compliance.

Biometric Lock

Face ID and Touch ID for quick unlock. Automatic session timeout locks the app after inactivity to protect customer data.

Navigation Integration

One-tap navigation to job sites via Apple Maps, Google Maps, or Waze. Configurable map preference in settings.

Estimates & Invoices

Create multi-option estimates and view invoices on-site. Record payments in the field — cash, check, or card.

UNDER THE HOOD

Built with Modern Tech

Native performance on both platforms with a shared codebase. Expo SDK for rapid iteration and over-the-air updates.

iOS + Android
Native on Both Platforms

14
Screen Hierarchies

46
Custom Components

7
Offline Mutation Types

React Native + Expo

Expo SDK 54, React Native 0.81, Expo Router 6 for file-based navigation.

State Management

Zustand stores with MMKV persistence + TanStack Query for server state and offline cache.

Styling

NativeWind (Tailwind for React Native) + Reanimated 3 for hardware-accelerated animations.

Equip Your Team with the Best Tool

FieldService Pro's mobile app is included with every plan. Your technicians can download it today and start working smarter.
